Q.1

NIN	contract No	hours	eName	HNo	hloc

a) Insertion

If an employ is added for different hNo; NIN would be repeated (causing Primary key violation) and insertion anomaly would occur.

b) Deletion.

If we delete any employ using NIN so all the data of that employ would be deleted along with HNo and hloc. This is delete anomaly.

c). Update.

If we update any employ's detail using NIN so all the data would be updated as NIN is being repeated. Updating HNo and hloc will also need multiple updates.
